

Florida Governor Awards Innovation Prize to Crystal Lagoons

Crystal Lagoons' technology enables the low cost construction and maintenance of crystal clear massive water bodies. This innovation, patented in 160 countries including the USA, is revolutionizing the real estate industry and experiencing exponential growth.

As a result, the firm is attracting significant interest from the authorities and the major real estate developers in the US. In this context, the Florida Governor, Rick Scott, distinguished the trajectory as an innovator and international business ambassador of Fernando Fischmann, founder of **Crystal Lagoons**, company that has just announced its entry into the USA, with its first project in Miami, and the inauguration of its headquarters in said state.

A few days earlier, Silicon Valley's top entrepreneurs and company founders from Wikia, MySpace, Zynga, Clickable, PVBLIC, i/oVentures, Mint, Adroll, Waze and Angellist, visited Fischmann in the Guinness World Record holding San Alfonso del Mar project, to open doors for technological cooperation.

Rick Scott, Florida Governor, awards the prize to Fernando Fischmann, Chairman of Crystal Lagoons, for his trajectory in innovation and international business.
